

NephroCAGE
German-Canadian consortium on AI for improved kidney transplantation outcome
1st NephroCAGE Symposium, May 20, 2021

Nephrology Disease Cooperation
between Canada and Germany
for Applied AI
Project Meeting Kick Off
May 20, 2021

WP2: Local Data Extraction

Dr. Ruth Sapir-Pichhadze B Med Sc, MD, MSc, PhD, FRCPC
McGill University Health Centre

Project
01 Objective

The
02 Need

The
03 Challenge

04 Explore solutions

Concept
05 Proof

Objective

Predict long-term kidney allograft survival using federated machine learning

Need

Large observational studies for robust inferences

Challenge

Data ownership and confidentiality issues relating to data sharing in international collaboration

Explore solutions

Examine data sharing models in international context

Proof

Develop and inform international data sharing best practices

Issues for Consideration

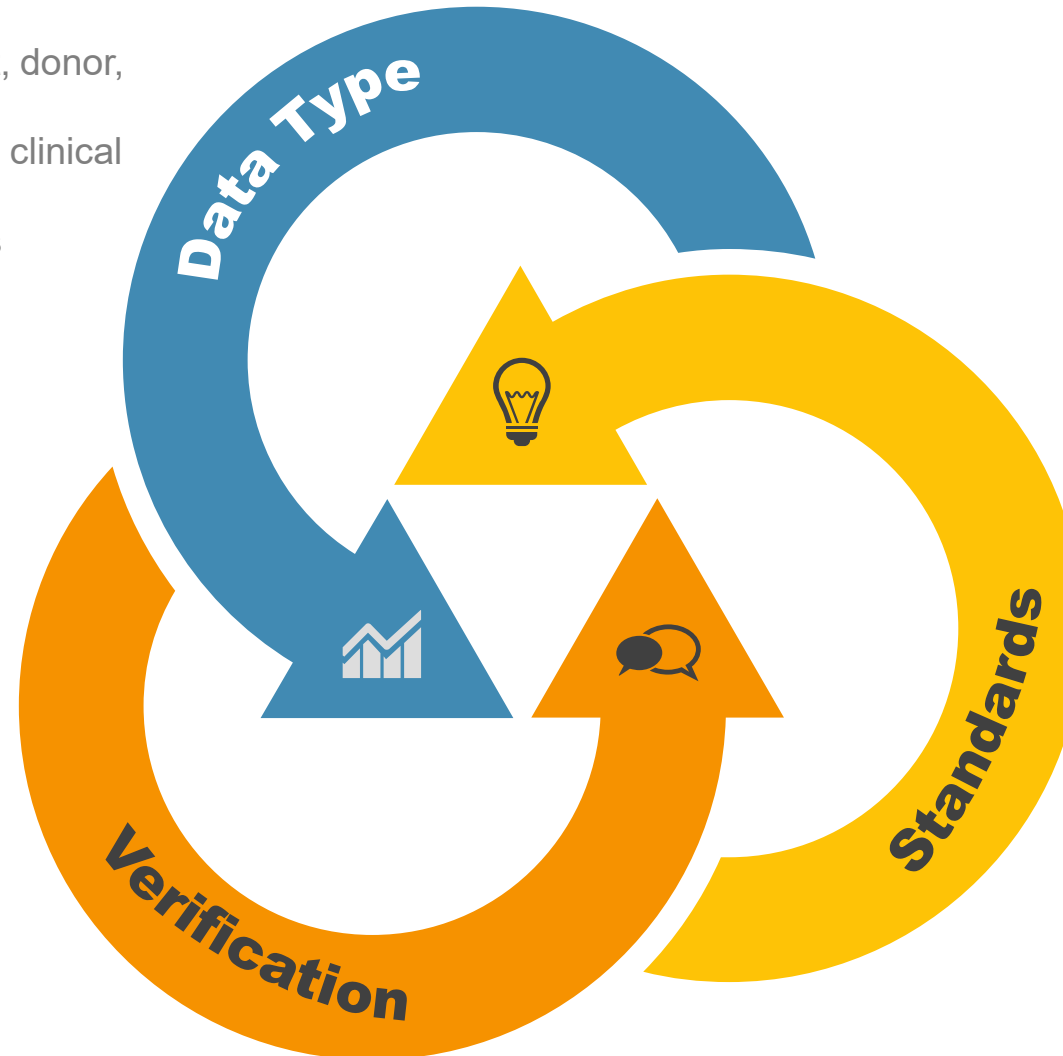

Data

Clinical datasets:

- comprehensive recipient, donor, transplant data
- longitudinal immune and clinical monitoring parameters
- therapeutic interventions

Verification of data validity and completeness

- Heterogeneity in standard operating procedures, data format, data content, synchronicity of measures curated of 3 cohorts :
- Germany - Charite
 - Quebec - McGill University Health Centre and Centre Hospitalier de l'Université de Montréal
 - BC – PROMIS database

Establishing a Minimal Set of Variables

1 OBJECTIVE

Establish minimal set of variables for research questions and aim toward harmonization

2 DETERMINE

- Priority outcomes and their definitions
- Inform immune risk
- Select
 - Recipient, donor, transplant characteristics
 - Immune and clinical parameters
 - Therapeutic interventions

4 Participants

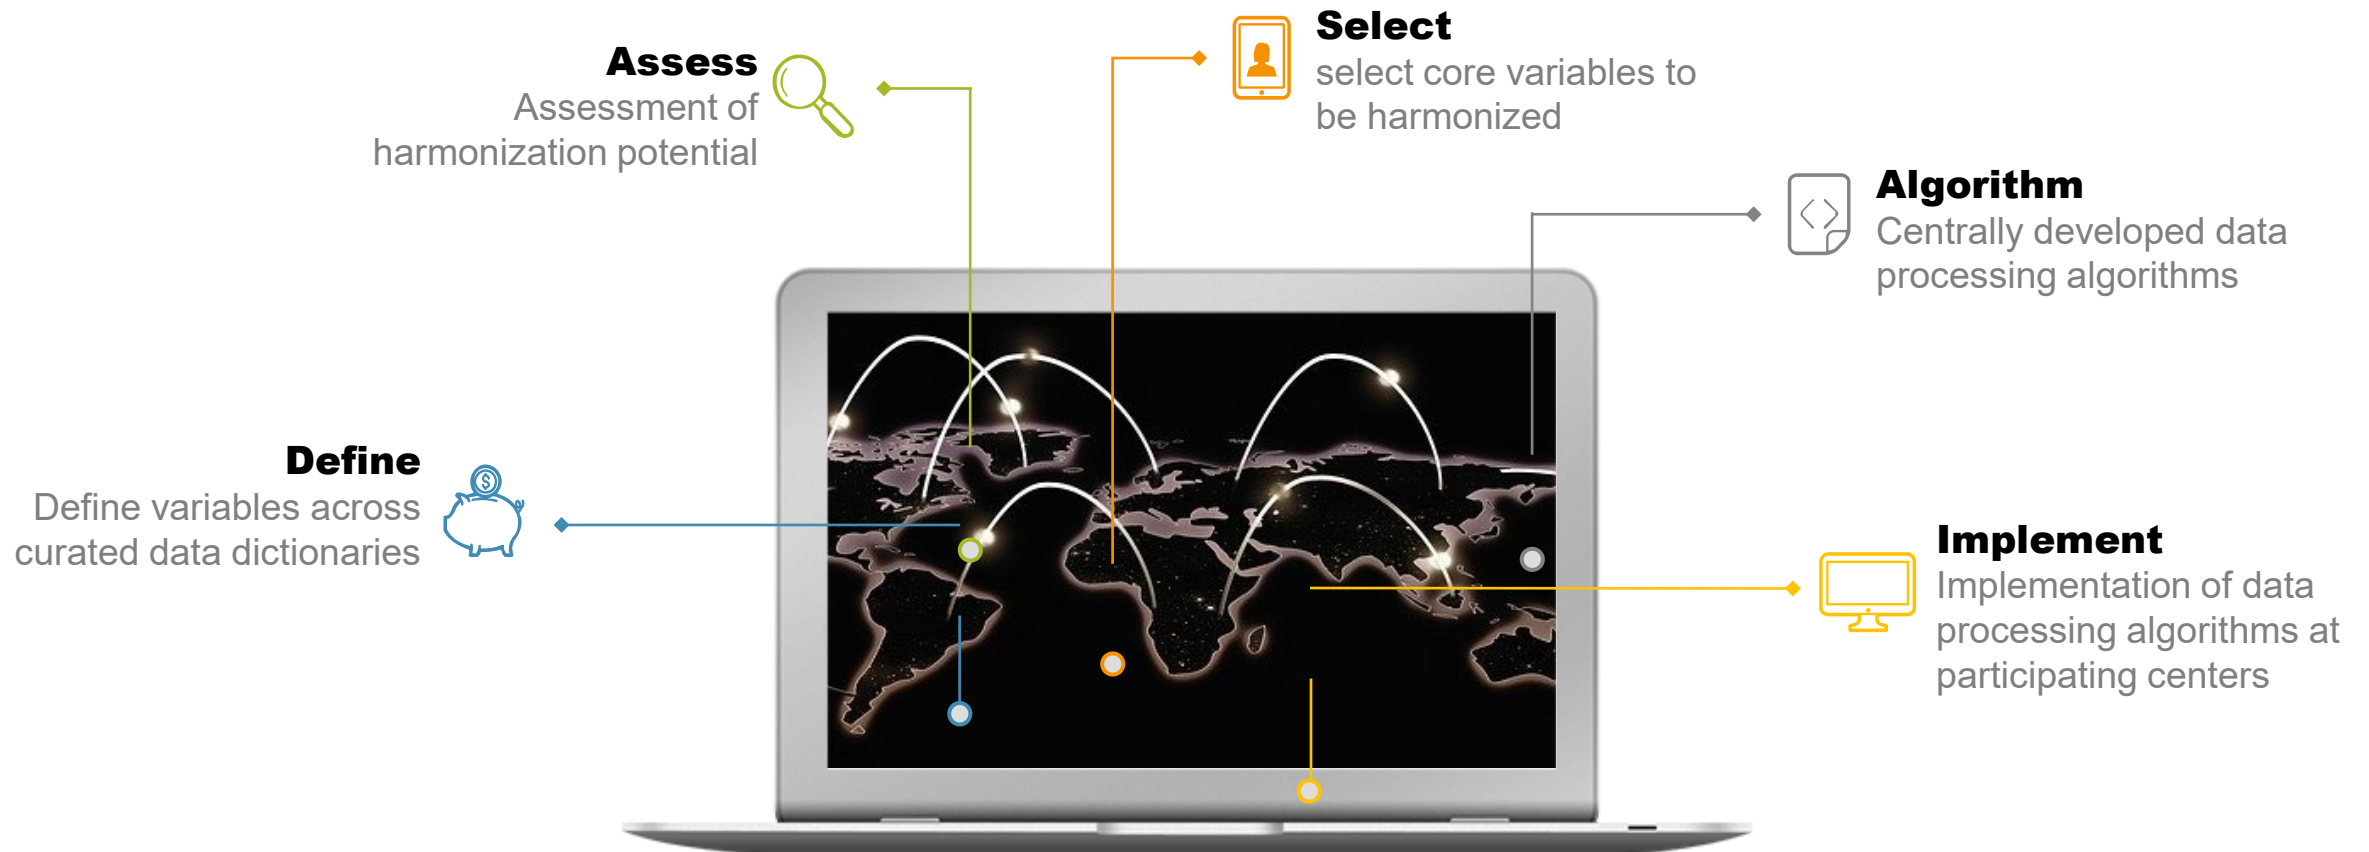

- Steering committee
- Data team
- Additional engagement of:
 - Experts in immunogenetics
 - Pathologists
 - Transplant clinicians

3 STAKEHOLDER ENGAGEMENT

Collaborative and respectful process for engaging stakeholders:

- Workshops
- Teleconferences
- Electronic communications, and
- Committees

Data Processing and Harmonization

- ENSURE**
- Documentation of process and decisions taken during harmonization for transparency and reproducibility
 - Document quality of the harmonized dataset
 - Sustainability plan to allow long-term utilization of dataset and support for users

SIGNIFICANCE

- NephroCAGE will serve as a proof of principle that decentralized analysis and federated machine learning can ensure:
 - Confidentiality of individual participant data
 - Generalizability of observations and robustness of inferences

T H A N K YOU!
